

Climatological Data for October, 1910.
DISTRICT No. 10, GREAT BASIN.

ALFRED H. THIESSEN, District Editor.

GENERAL CLIMATOLOGICAL CONDITIONS.

The month of October, 1910, was exceptionally pleasant, most of the days being warm and sunny, and the precipitation, while quite heavy, falling on comparatively few days. The temperature for the district was fairly uniform, and averaged about 1.4° above the normal. The precipitation was unevenly distributed, and for the district averaged 0.21 inch above normal.

TEMPERATURE.

The monthly mean temperatures were high generally, but more especially in the sheltered valleys of the Utah area, in the lake region of Nevada, and in the Oregon area. The means ranged from 65.6° , at Jean, in southern Nevada, to 39.4° , at Geyser, in eastern Nevada. The greatest plus departure occurred at Ely, Nev., whose mean temperature was 49.6° , which is 6.2° above normal; while the greatest minus departure occurred at Corinne, Utah, where the mean temperature was 45.0° , or 6.4° below normal. Only a few places on the shores of Great Salt Lake and in central Nevada reported temperatures below normal.

The highest temperature of the month occurred during the first decade, and almost all stations reported their maximum temperatures as occurring in that period. The highest reported was 95° at Fillmore, Utah, on the 9th, while temperatures of 90° or above occurred at a few other places, and temperatures above 80° occurred at most stations in the district.

The temperature fell generally after the 11th, and continued moderately low for the remainder of the month. The lowest temperatures occurred, as a rule, during the period extending from the 25th to the end of the month, but some stations in Nevada reported their lowest temperatures on the 12th, 13th, and 14th. The lowest temperature for the month was 7° at Cobre, Nev., on the 28th, the next lowest being 8° at Woodruff, Utah, on the 28th and subsequent dates. There were only three stations in the entire district whose minimum temperatures did not fall to freezing during the month, namely, Salt Lake City and International, Utah, and Jean, Nev.

The greatest monthly range of temperature for the district was 87° ; the greatest monthly station range was 80° at Carlin, Nev.; and the greatest daily range was 67° at the same place.

PRECIPITATION.

The precipitation for the district as a whole averaged 1.05 inch, which is 0.21 inch above normal. Exceptionally large amounts for the region fell in the Utah area, south-central Nevada, and in parts of the Oregon area. At nearly all stations in the Utah area the monthly amounts were much above normal. Deficient amounts fell in northwestern Utah and north-eastern Nevada.

Rain fell over practically the entire district on the 1st, and continued locally until the 4th. Rain again began on the 11th and fell almost continuously at some point in the district until the 19th. Fair weather prevailed for the remainder of the month.

The largest 24-hour amount was 2.00 inches, which fell at Park City, Utah, on the 19th. The largest monthly amount, 4.17 inches, also occurred at that place.

One inch of snow fell at Evanston, Wyo., and at Glenbrook, Nev. Traces of snow were reported at a few other stations.

MISCELLANEOUS PHENOMENA.

Sunshine during the month was below normal, but plentiful. At Salt Lake City, Utah, 68 per cent of the possible amount was recorded.

For the district there was an average of 20 clear, 5 partly cloudy, 6 cloudy, and 4 rainy days.

NOTE.

The Strawberry Valley Project of the Reclamation Service is now 43 per cent completed, 492 linear feet of the tunnel having been excavated during October. The tunnel is 35 per cent done. About 2,000 feet of the bottom and several hundred feet of the sides and arch, all concrete, were placed during the month.

*, b, e, etc., indicate, respectively, 1, 2, 3, etc., days missing from the record.

* Precipitation included in that of the next measurement.

** Temperature extremes are from observed readings of the dry bulb; means are computed from observed readings.

† Also on other dates.

‡ Separate dates of falls not recorded.

§ Data are from standard instruments not supplied by the U. S. Weather Bureau.

|| Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

Estimate by observer.

¶ Precipitation for the 24 hours ending on the morning when it is measured.

T. Precipitation is less than 0.01 inch rain or melted snow.
